

AMENDMENTS TO THE CLAIMS

1. (Previously presented) Porous bodies comprising a three dimensional open cell oil-in-water emulsion-formed lattice which porous bodies are water soluble such that hydrophobic materials contained within the lattice are dispersed when the porous bodies are exposed to an aqueous medium, the porous bodies containing

(a) 10 to 95% by weight of a water soluble polymeric material and

(b) 5 to 90% by weight of a surfactant,

said porous bodies having an intrusion volume as measured by mercury porosimetry of at least about 3 ml/g; having hydrophobic material incorporated into the polymeric lattice; and comprising two types of pores:

(1) from sublimation of solid ice from the water phase of the emulsion, and

(2) from the sublimation of the oil phase of the emulsion;

with the proviso that said porous bodies are not spherical beads having an average bead diameter of 0.2 to 5mm; and
